shade *going green*

Aristocrat
AWNINGS
SHADES • CANOPIES

A hundred years ago, awnings were common on hotels, office buildings and the grandest of houses for a very good reason — they shaded patios and terraces for outdoor comfort, and kept the building interior cool.

Today, rising energy costs have brought back a new generation of shade products that feature technological advancements in fabrics, electronics and engineering. Not only do these products save on energy consumption and protect you, your employees and your customers from exposure to harmful ultraviolet (UV) rays, they look great, grab attention and create comfortable outdoor seating opportunities.

In fact, did you know that awnings and other shade products:

- block harmful UV rays that cause skin cancer by **94%**
- reduce indoor temperatures by as much as **15 degrees**
- cut utility bills by as much as **33%**
- are the **most efficient way** to bring shaded comfort to decks, patios, terraces or building interiors.

Aristocrat® Awnings, Shades and Canopies combine American and European fabrics and components to produce beautifully crafted products truly worthy of their name - **ARISTOCRAT**.

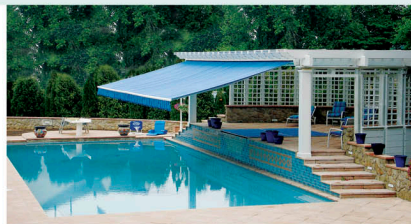

Aristocrat Awnings, Canopies and Solar Shades open and close manually or automatically at the touch of a button

retractable awnings

exterior solar shades

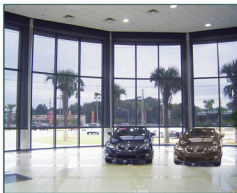

BLOCK THE SUN'S HEAT AND UV RAYS, ADD PRIVACY AND SECURITY WHILE MAINTAINING FULL VISIBILITY TO THE OUTDOORS

The **MOST EFFICIENT** way to block the heat of the sun is from the outside ... **BEFORE** it has a chance to heat the window glass!

Large windows are great for bringing light into commercial spaces, but light also brings higher air conditioning costs and damaging rays that fade your interior. Solar shades block the heat and UV rays when needed, while maintaining full visibility to the outdoors.

- Exterior shades glide along stainless steel rods, cables or heavy duty tracks
- Control how much light enters your space by selecting from three fabric choices: acrylic awning fabric, PVC-coated polyester or fiberglass screen
- Motorized options offer flexibility to adjust each shade independently
- White, desert sand or bronze frames
- Shades can be screened with your logo or promotional message

*American Society of Heating and Air Conditioning Engineers.

50% of the **SOLAR HEAT** entering a room comes through the glass ...
accounting for approximately
20% of the load on an air conditioner*
